Part No. 2006226310 Printed in China Edition 1 July 2014

Product Warranty (2 years)

Advantech warrants to you, the original purchaser, that each of its products will be free from defects in materials and workmanship for two years from the date of purchase.

This warranty does not apply to any products which have been repaired or altered by persons other than repair personnel authorized by Advantech, or which have been subject to misuse, abuse, accident or improper installation. Advantech assumes no liability under the terms of this warranty as a consequence of such events.

Because of Advantech's high quality-control standards and rigorous testing, most of our customers never need to use our repair service. If an Advantech product is defective, it will be repaired or replaced at no charge during the warranty period. For outof-warranty repairs, you will be billed according to the cost of replacement materials, service time and freight. Please consult your dealer for more details.

If you think you have a defective product, follow these steps:

- 1. Collect all the information about the problem encountered. (For example, CPU speed, Advantech products used, other hardware and software used, etc.) Note anything abnormal and list any onscreen messages you get when the problem occurs.
- 2. Call your dealer and describe the problem. Please have your manual, product, and any helpful information readily available.
- 3. If your product is diagnosed as defective, obtain an RMA (return merchandize authorization) number from your dealer. This allows us to process your return more quickly.
- 4. Carefully pack the defective product, a fully-completed Repair and Replacement Order Card and a photocopy proof of purchase date (such as your sales receipt) in a shippable container. A product returned without proof of the purchase date is not eligible for warranty service.
- 5. Write the RMA number visibly on the outside of the package and ship it prepaid to your dealer.

Technical Support and Assistance

- 1. Visit the Advantech web site at www.advantech.com/support where you can find the latest information about the product.
- 2. Contact your distributor, sales representative, or Advantech's customer service center for technical support if you need additional assistance. Please have the following information ready before you call:
 - Product name and serial number
 - Description of your peripheral attachments
 - Description of your software (operating system, version, application software, etc.)
 - A complete description of the problem
 - The exact wording of any error messages

Packing List

Before installation, please ensure the following items have been shipped:

Item Part Number

- 1 MIO-2263 SBC
- 1 Startup manual
- Cables

Part Number	Description
1700006291	SATA cable 7P 30 cm w/ right angle
1700022444-01	Audio Cable 2*5P-2.0/JACK*2 20cm
1701200220	COM PORT cable 2*10P-2.0/D-SUB 9P(M)*2 22 cm
1700019656	SATA Power cable 5P-1.25/5P-2.0+SATA 5P 15 cm
1700002172	USB cable 2.0mm pitch USB-A(F) 17cm
1700019705	AT Power cable 12cm

Heatsink:

1960063455T001	99.5 x 70.5 x 15.7 mm

Stud & Screw

Part Number	Description
9666226300E	Stud and screw pack, including:
1935031500	Screw R/S D=5.3 H=2 + M3*15L, 4 pcs
1910002596-01	Stud F=M3*10L M=M3*5L B=5 H=19, 4 pcs
193B0204C0	Screw F/S D=3.5 H=0.8 + M2*4L, 2 pcs

Ordering Information

Model Number	Description
MIO-2263J-U0A1E	Intel® Atom™ SoC J1900, fanless, LVDS, VGA, Gigabit Ethernet, 4 USB, mSATA, SMBus, GPIO, 2 COM, mini PCIe, MIOe
MIO-2263JH-U0A1E	Intel® Atom™ SoC J1900, fanless, LVDS, HDMI, Gigabit Ethernet, 4 USB, mSATA, SMBus, GPIO, 2 COM, mini PCIe, MIOe
MIO-2263E-S3A1E	Intel Atom SoC E3825, fanless, LVDS, VGA, Gigabit Ether- net, 4 USB, mSATA, SMBus, GPIO, 2 COM, mini PICe, MIOe

Optional Accessories

Part No.	Description
1960065074N001	Heat Spreader (99.5 x 70.5 x 11.2 mm)

Declaration of Conformity

This device complies with the requirements in part 15 of the FCC rules: Operation is subject to the following two conditions:

- 1. This device may not cause harmful interference, and
- 2. This device must accept any interference received, including interference that may cause undesired operation

FCC Class A

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this device in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his/her own expense. The user is advised that any equipment changes or modifications not expressly approved by the party responsible for compliance would void the compliance to FCC regulations and therefore, the user's authority to operate the equipment.

Caution! There is a danger of a new battery exploding if it is incorrectly installed. Do not attempt to recharge, force open, or heat the battery. Replace the battery only with the same or equivalent type recommended by the manufacturer. Discard used batteries according to the manufacturer's instructions.

Safety Instructions

- 1. Read these safety instructions carefully.
- 2. Keep this User Manual for later reference.
- 3. Disconnect this equipment from any AC outlet before cleaning. Use a damp cloth. Do not use liquid or spray detergents for cleaning.
- 4. For plug-in equipment, the power outlet socket must be located near the equipment and must be easily accessible.
- 5. Keep this equipment away from humidity.
- 6. Put this equipment on a reliable surface during installation. Dropping it or letting it fall may cause damage.
- 7. The openings on the enclosure are for air convection. Protect the equipment from overheating. DO NOT COVER THE OPENINGS.
- 8. Make sure the voltage of the power source is correct before connecting the equipment to the power outlet.
- 9. Position the power cord so that people cannot step on it. Do not place anything over the power cord.
- 10. All cautions and warnings on the equipment should be noted.
- 11. If the equipment is not used for a long time, disconnect it from the power source to avoid damage by transient overvoltage.
- 12. Never pour any liquid into an opening. This may cause fire or electrical shock.
- 13. Never open the equipment. For safety reasons, the equipment should be opened only by qualified service personnel.
- 14. If one of the following situations arises, get the equipment checked by service personnel:
 - The power cord or plug is damaged.
 - Liquid has penetrated into the equipment.
 - The equipment has been exposed to moisture.
 - The equipment does not work well, or you cannot get it to work according to the user's manual.
 - The equipment has been dropped and damaged.
 - The equipment has obvious signs of breakage.
- 15. DO NOT LEAVE THIS EQUIPMENT IN AN ENVIRONMENT WHERE THE STORAGE TEMPERATURE MAY GO BELOW -20° C (-4° F) OR ABOVE 60° C (140° F). THIS COULD DAMAGE THE EQUIPMENT. THE EQUIPMENT SHOULD BE IN A CONTROLLED ENVIRONMENT.
- 16. CAUTION: DANGER OF EXPLOSION IF BATTERY IS INCORRECTLY REPLACED. REPLACE ONLY WITH THE SAME OR EQUIVALENT TYPE RECOMMENDED BY THE MANUFACTURER, DISCARD USED BATTERIES ACCORDING TO THE MANUFACTURER'S INSTRUCTIONS.

The sound pressure level at the operator's position according to IEC 704-1:1982 is no more than 70 dB (A).

DISCLAIMER: This set of instructions is given according to IEC 704-1. Advantech disclaims all responsibility for the accuracy of any statements contained herein.

Safety Precaution - Static Electricity

Follow these simple precautions to protect yourself from harm and the products from damage.

- To avoid electrical shock, always disconnect the power from your PC chassis before you work on it. Don't touch any components on the CPU card or other cards while the PC is on.
- Disconnect power before making any configuration changes. The sudden rush of power as you connect a jumper or install a card may damage sensitive electronic components.

General Introduction

This chapter gives background information on the MIO-2263.
Sections include:
Introduction
Product Features
Specifications

1.1 Introduction

MIO-2263 is a MI/O-Ultra SBC (Single Board Computer) with Embedded Intel® Atom[™] SoC J1900 2.0 GHz and E3825 1.33 GHz Processor. The MIO-2263 can support DDR3L memory up to 8 GB, has one USB 3.0 and 3 USB2.0 compatible ports, one GbE (up to 1000 Mbps) interface, LVDS and VGA or HDMI support, HD (High Definition) audio, and one half size mini-PCIe and MIOe expansion slot. In addition, MIO-2263 also supports one SATA drive, two COM ports, SMBus, one GPIO and one half size mSATA slot. Advantech's innovative MI/O (multiple I/O) Extension SBC is equipped with flexible multiple I/O to assist integrators in developing optimized solutions.

1.2 Specifications

1.2.1 General Specifications

- **CPU:** Intel® Atom[™] SoC processor J1900/ E3825
- System Chipset Intel® Atom[™] SoC J1900/ E3825
- BIOS: AMI EFI 64 Mbit Flash BIOS
- System Memory: DDR3L, 1333 MHz for J1900, 1066 MHz for E3825, up to 8 GB
- Watchdog Timer: Single chip Watchdog 255-level interval timer, setup by software
- Expansion Interface:
 - 1 x half size mini-PCIe slot
 - 1 x MIOe connector: supports 2 x USB 2.0, 2 x PCIe x1, LPC, HD Audio lineout, SMBus, DP (or HDMI, supported by request), 5 Vsb/12 Vsb power
- Battery: Lithium 3 V / 210 mAH

I/O

- Internal I/O interface: 2 x USB2.0, 1 x RS-232, 1 x RS-232/422/485, 1 x HD Audio (line in, line out), GPIO, SMBus
- Rear I/O ports: 1 x RJ45 Ethernet, 1 x VGA or HDMI, 1 x USB 3.0, 1 x USB 2.0, 1 x Power connector (or DC jack, supported by request):

Ethernet

- **Controller:** Intel i210 (GbE1)
- **Speed:** 10/100/1000 Mbps
- Connector: 1 x RJ45
- Standard: Compliant with IEEE 802.3, IEEE 802.3u, IEEE 802.3z, IEEE 802.ab
- Support wake-on-LAN

Display

- **Controller:** Intel® Atom[™] SoC J1900/ E3825, Directx* 11 and OpenGL 3.0 support
- Resolution:
 - VGA: 1920 x 1200
 - LVDS: 18/24-bit LVDS1, up to 1440 x 900
 - HDMI: 1920 x 1080

1.2.2 Functional Specifications

Processor

Processor	:	Intel® Atom [™] SoC Processor J1900/ E3825 Frequency – J1900 2.0 GHz/ CPU Burst 2.42 GHz – E3825 1.33 GHz Manufacturing Technology: 22 nm L2 cache: 2 MB (J1900)/ 1 MB (E3825)
Memory		Supports DDR3L, 1333 MHz (J1900), DDR3L 1066 MHz (E3825), up to 8 GB SODIMM Socket: 204-pin SODIMM socket type *1
Graphic Engine	:	Directx* 11, OGL 3.0, OCL 1.1, OGL ES 2.0 Hardware decode/ acceleration: - Encode: H264, MPEG2/4, VC1, WMV9 - Decode: H264, MPEG2
Display	:	VGA: 1920 x 1200 @ 60 Hz HDMI: 1920 x 1080 LVDS1: 18/24-bit, up to 1440 x 900 @ 60 Hz Dual independent display: LVDS + VGA or HDMI + LVDS
Chipset		
Control Hub		Intel® Atom SoC processor J1900/ E3825
Audio		High Definition Audio (HD) ALC-888S codec Up to 2 channel of PCM (Pulse Code Modulation) audio out- put Connectors: Line-out, Line-in
PCI-Express Interface	:	4 PCI-Express x1 Lanes Lane 1 &2 : MIOe connector Lane 3: Half-size Mini PCIe connector Lane 4: Intel i210 GbE controller
SATA Interface		1 x mSATA by mini-PCIe socket 1 x SATAII (Max. Data transfer Rate 300 MB/s)
USB Interface		2 x internal USB ports 2 x rear I/O ports at coastline (one USB 2.0 + one USB 3.0) Transmission speed up to 480 Mbps (USB 2.0) / 5 Gbps (USB 3.0)
Power Management		Full ACPI (Advanced Configuration and Power Interface) 3.0 Supports S0, S3, S4, S5 Support wake on LAN
BIOS	AMI	EFI 64 Mbit Flash BIOS via SPI

Others н. Controller: Intel® i210 (GbE1) Compliant with IEEE 802.3, IEEE 802.3u, IEEE 802.3z, IEEE 802.ab н. Support 10/100/1000 Mbps Connectors: RJ45 Ethernet н. LAN1 LED Link: Green (100Mbps)/ Orange (1000Mbps) Active: Green (flash) н. Support wake on LAN Controller: SMSC SCH 3114 Serial ports 1 x RS-232 / 1 x 232/422/485 serial ports with ESD protection: air gap ± 15 kV, contact ± 8 kV н. Controller: SMSC SCH 3114 GPIO н. 8-Bit (programming) through Super I/O, pin header 5 V tolerance **SMBus** Default is SMBus

1.2.3 Mechanical Specifications

1.2.3.1 Dimensions (mm)

L100 mm x W72 mm (3.9" x 2.8")

- 1.2.3.2 Height on top (mm) 15.7 mm (Heatsink)
- 1.2.3.3 Height under bottom (mm) 16.34 mm (Rear I/O USB)
- **1.2.3.4 Weight (g)** 0.46 kg (1.01 lb, weight of total package)

1.2.4 Electrical Specifications

Power Supply Type: Single 12 V DC power input (support DC power hot plug)

1.2.4.1 Power supply Voltage

- Single 12 V input ±10%
- Total peripheral power supply output: 5 V @ 3 A for CPU board and MIOe module totally, 12 V @ 2 A for MIOe module

1.2.4.2 Power Consumption

- Typical in Windows 8 Idle Mode: J1900: 0.85 A @ 12 V (10.2 W)
 E3825: 0.59 A @ 12 V (7.08 W)
- Max in Windows 8 HCT12 (10 minutes): J1900: 1.04 A @ 12 V (12.48 W)
 E3825: 0.76 A @ 12 V (9.12 W)

1.2.4.3 RTC Battery

- Typical Voltage: 3.0 V
- Normal discharge capacity: 210 mAh

1.2.5 Environmental Specifications

- 1.2.5.1 Operating Humidity 40 °C @ 95% RH Non-Condensing
- **1.2.5.2** Operating Temperature 0 ~ 60 °C (32~140 °F)
- 1.2.5.3 Storage Humidity 60 °C @ 95% RH Non-Condensing
- **1.2.5.4** Storage Temperature -40 ~ 85 °C (-40 ~ 185 °F)

1.3 Function Block Diagram

MIO-2263 User Manual

H/W Installation

This chapter explains the setup procedures of the MIO-2263 hardware, including instructions on setting jumpers and connecting peripherals, as well as switches, indicators and mechanical drawings. Be sure to read all safety precautions before you begin the installation procedure.

2.1 Jumpers

2.1.1 Jumper Description

Cards can be configured by setting jumpers. A jumper is a metal bridge used to close an electric circuit. It consists of two metal pins and a small metal clip (often protected by a plastic cover) that slides over the pins to connect them. To close a jumper, you connect the pins with the clip. To open a jumper, you remove the clip. Sometimes a jumper will have three pins, labeled 1, 2 and 3. In this case you would connect either pins 1 and 2, or 2 and 3.

The jumper settings are schematically depicted in this manual as follows.

A pair of needle-nose pliers may be helpful when working with jumpers. If you have any doubts about the best hardware configuration for your application, contact your local distributor or sales representative before you make any changes.

Generally, you simply need a standard cable to make most connections.

Warning! To avoid damaging the computer, always turn off the power supply before setting jumpers.

2.1.2 Jumper List

2.2.1 Connector List

CN1	12 V Power Input
CN2	DC JACK (by request)
CN3	12 V Power Input (2 x 3 pin support by request)
CN6	DDR3 SO-DIMM
CN9	GPIO
CN11	VGA
CN12	HDMI
CN13	Front Panel
CN14	SATA
CN15	mSATA
CN16	Mini PCIe
CN18	Internal USB
CN19	External USB 3.0 + USB 2.0
CN20	COM1/COM2
CN24	Gigabit Ethernet
CN27	HD Audio
CN29	MIOe
CN30	Inverter Power/Internal SATA Power
CN31	18/24 bits LVDS Panel
CN33	SMBus
BH1	Battery

2.2.2 Connector Settings

2.2.2.1 Battery Connector (BH1)

MIO-2263 supports Lithium 3 V/210 mAH CR2032 battery with wire via battery connector (BH1).

- 1. Turn off system power
- 2. Unplug CR2032 battery cable on BH1
- 3. Waiting for 15sec or short BH1 pin1-2
- 4. Connect battery cable on BH1
- 5. Turn on system power

2.2.2.2 12 V Power Input Connector (CN1)

Main power connector supports single 12 V input, and there's an optional choice of DC/Jack (CN2, co-layout with 2pin power connector)

2.2.2.3 DDRIII SODIMM Socket (CN6)

One 204-pin/H9.2 mm DDRIII DIMM socket supports DDR3L 1333 MHz (J1900)/ 1066 MHz (E3825) up to 8 GB.

2.2.2.4 GPIO (General Purpose Input Output) (CN9)

The board supports 8-bit GPIO (5 V tolerance) through GPIO pin header. The 8 digital inputs and outputs can be programmed to read or control devices, with each input or output defined.

2.2.2.5 VGA/ HDMI/ LVDS Interface Connections (CN11/ CN12/ CN31)

The MIO-2263's display interface support either VGA or HDMI on rear IO and is capable of driving a wide range of flat panel displays, including passive LCD and active LCD displays. The board has three kinds of connector types to support these displays: one is on rear IO support either standard CRT VGA monitors or high definition HDMI display and one for LVDS type LCD panels.

CRT display connector (CN11)

The CRT display 15pins connector is a rear I/O connector on coastline used for conventional CRT displays. Resolution: up to 1920 x 1200.

HDMI display connector (CN12)

MIO-2263 also support HDMI display output, meet HDMI1.4a specification. Resolution: up to 1920 x 1080.

LVDS LCD panel connector (CN31)

The board supports single channel 18/24-bit LVDS LCD panel displays via 14*1pin wafer box. Resolution: up to 1400 x 900.

2.2.2.6 Front Panel Connector(CN13)

MIO-2263 integrates below functions as front panel 6pin connector.

Power button

Supports power on/off button in ATX mode.

Reset

If you install a reset switch, it should be an open single pole switch. Momentarily pressing the switch will activate a reset.

Power LED

Power LED indicator would light when power is on.

HDD LED

HDD LED indicator for hard disk access is an active low signal

2.2.2.7 SATA Connector (CN14)

MIO-2263 features one high performance Serial ATA interfaces. Data transfer rates up to 300 MB/s enabling very fast data and file transfer, and independent DMA operation on two ports.

2.2.2.8 mSATA Connector (CN15)

MIO-2263 provides a half size mini-PCIe socket which integrates SATAII signals, supports mSATA interface modules.

2.2.2.9 Mini PCIe Connector (CN16)

MIO-2263 supports a half size mini PCIe slot. PCI Express Mini Card (also known as Mini PCI Express, Mini PCIe, and Mini PCI-E) is a replacement for the Mini PCI form factor based on PCI Express. It is developed by the PCI-SIG. The host device supports both PCI Express and USB 2.0 connectivity.

2.2.2.10 USB Connectors (CN18 and CN19)

The board provides four USB (Universal Serial Bus) ports, two are rear I/O on coastline (CN19); and the other two are internal USB ports (CN18). The rear I/O USB port support one USB 3.0 port and one USB 2.0. The USB 3.0 port comply with USB specification Rev. 3.0 which supports 5.0 Gbps transfer rate and backward compatible with USB 2.0 device. This gives complete Plug and Play, and hot attach/detach for up to 127 external devices. Other USB interfaces comply with USB specification Rev. 2.0 which supports 480 Mbps transfer rate and are fuse protected.

2.2.2.11 COM Port Connectors (CN20)

MIO-2263 provides two serial ports in 10 x 2pin pin header. COM2 is for RS-232 and COM1 is for RS-232/422/485 functionality. It provides connections for serial devices or a communication network. The pin assignments for the COM port connector can be found in Appendix.

2.2.2.12 Gigabit Ethernet Connector (CN24)

MIO-2263 uses Intel® i210 Ethernet chip (10/100/1000 Mbps) linked to dedicated PCIe x1 lane via RJ-45 connector.

2.2.2.13 High Definition Audio Interface (CN27)

MIO-2263 provides one 5 x 2 pin box header for audio device. It can support high definition audio stereo by customized audio module that has codec onboard.

2.2.2.14 MIOe connector (CN29)

MIO-2263 supports MIOe connector to extend flexible I/Os.

Interface

2 x USB 2.0, 2 x PCIe x1, LPC, HD Audio line-out, SMBus, DP (or HDMI, supported by request), 5 Vsb/12 Vsb power.

Total peripheral power supply output

5 V @ 3 A for CPU board and MI/O Extension module totally, 12 V @ 2 A for MI/O Extension module.

2.2.2.15 Inverter Power/Internal SATA Power Connector (CN30)

The LCD inverter is connected to CN30 via a 5-pin connector to provide +5 V/+12 V power to the LCD display, and 5V power can be provided for 2.5" SATA HDD via CN30.

SATA power's current is only sufficient for 2.5" HDD, and LVDS inverter's current is 5 V @ less than 1 A, 12 V @ 500 mA.

2.2.2.16 SMBus Connector (CN33)

MIO-2263 provides SMBus connector for customer connection to SMBus protocol embedded device.

Advantech also provide SMBus API allowing developers to interface with an embedded system environment and transfer serial messages using the SMBus protocols, allowing multiple simultaneous device control.

2.3 Mechanical

Figure 2.5 Board dimension layout (coastline with power connector and heatsink)

Figure 2.6 Board dimension layout (coastline with Power connector and optional heatspreader)

Figure 2.7 Board dimension layout (coastline with optional DC/jack)

2.3.2.2 MI/O Module Height Constraint

To avoid mechanical conflict with MI/O-Ultra CPU board, it's recommended to refer to the following drawing of MI/O module height constraint.

unit: mm

Figure 2.8 MI/O module height constraint

- 1. Constraint of components' max. height of MI/O module base on 16 mm height MIOe connector. If needed, there's 19 mm height as well.
- 2. The height of power connector (including of cable) on MIO-2263 should be considered when assembling the system or stacking the MI/O module.

2.3.2.3 Another Thermal Solution - Heat Spreader

MIO-2263 has an optional heat spreader to make whole system more compact. Using a heat spreader to conduct heat to your chassis can help a lot when system is extra compact or limited space for heat convection. Here are some guidelines for heat spreader:

- 1. For best heat conduction, the gap between chassis and heat spreader should be smaller, the smaller the better.
- The height of existing heat spreader is 11.2mm (Advantech P/N: 1960065074N001). If you need some other height to fit chassis better, Advantech could customize it for you. (Please contact our sales for details)
- 3. There are thermal grease and screws in heat spreader kit, thermal grease helps conduct better if chassis is quite close to heat spreader. Another suggestion is to use a thermal pad if the chassis isn't close enough to the heat spreader. (The gap is suggested to be less than 3mm for better heat conduction)

Figure 2.9 Illustration of heat spreader assembly

BIOS Settings

3.1 BIOS Setup

AMIBIOS has been integrated into many motherboards for over a decade. With the AMIBIOS Setup program, users can modify BIOS settings and control various system features. This chapter describes the basic navigation of the MIO-2263 BIOS setup screens.

Aptio Setup Utility Main Advanced Chipset Securit	∣ <mark>– Copyright (C) 2013 Ameri</mark> y Boot Save & Exit	can Megatrends, Inc.

AMI's BIOS ROM has a built-in Setup program that allows users to modify the basic system configuration. This information is stored in flash ROM so it retains the Setup information when the power is turned off.

Note!

Default BIOS is supported for 64 bit OS installation, BIOS for 32 bit OS is supported by project, please contact with sales representative for details.

3.2 Entering Setup

Turn on the computer and check for the -patch" code. If there is a number assigned to the patch code, it means that the BIOS supports your CPU. If there is no number assigned to the patch code, please contact an Advantech application engineer to obtain an up-to-date patch code file. This will ensure that your CPU's system status is valid. After ensuring that you have a number assigned to the patch code, press and you will immediately be allowed to enter Setup.

3.2.1 Main Setup

When users first enter the BIOS Setup Utility, users will enter the Main setup screen. Users can always return to the Main setup screen by selecting the Main tab. There are two Main Setup options. They are described in this section. The Main BIOS Setup screen is shown below.

The Main BIOS setup screen has two main frames. The left frame displays all the options that can be configured. Grayed-out options cannot be configured; options in blue can. The right frame displays the key legend.

Above the key legend is an area reserved for a text message. When an option is selected in the left frame, it is highlighted in white. Often a text message will accompany it.

System time / System date

Use this option to change the system time and date. Highlight System Time or System Date using the <Arrow> keys. Enter new values through the keyboard. Press the <Tab> key or the <Arrow> keys to move between fields. The date must be entered in MM/DD/YY format. The time must be entered in HH:MM:SS format.

3.2.2 Advanced BIOS Features Setup

Select the Advanced tab from the MIO-2263 setup screen to enter the Advanced BIOS Setup screen. Users can select any item in the left frame of the screen, such as CPU Configuration, to go to the sub menu for that item. Users can display an Advanced BIOS Setup option by highlighting it using the <Arrow> keys. All Advanced BIOS Setup options are described in this section. The Advanced BIOS Setup screens are shown below. The sub menus are described on the following pages.

		F4: Save & Exit
		ESC: Exit
Version 2.16.1242. Co	pyright (C) 2013 American M	egatrends, Inc.

Legacy USB Support

Enables support for legacy USB. Auto option disables legacy support if no USB devices are connected. DISABLE option will keep USB devices available only for EFI applications.

XHCI Hand-Off

This is a workaround for OSes without XHCI hand-off support. The XHCI ownership change should claim by XHCI driver.

EHCI Hand-Off

This is a workaround for OSes without EHCI hand-off support. The EHCI ownership change should claim by EHCI driver.

USB Mass Storage Driver Support

This item allows you to enable or disable the USB mass storage device support.

Device reset time-out

USB mass storage device start unit command time-out.

Device power-up delay

Maximum time the device will take before it properly report itself to the host controller. "Auto" uses default value: for a Root port it is 100 ms, for a Hub port the delay is taken from Hub descriptor.

Save Changes and Exit

This item allows you to exit system setup after saving the changes.

Discard Changes and Exit

This item allows you to exit system setup without saving any changes.

Save Changes and Reset

This item allows you to reset the system after saving the changes.

Discard Changes and Reset

This item allows you to rest system setup without saving any changes.

Save Changes

This item allows you to save changes done so far to any of the options.

Discard Changes

This item allows you to disccard changes done so far to any of the options.

Restore Defaults This item allows you to restore/load default values for all the options.

Save as User Defaults

This item allows you to save the changes done so far as user defaults.

Restore User Defaults

This item allows you to restore the user defaults to all the options.

Boot Override

Boot device select can override your boot priority.

S/W Introduction & Installation

4.1 S/W Introduction

The mission of Advantech Embedded Software Services is to "Enhance quality of life with Advantech platforms and Microsoft® Windows® embedded technology." We enable Windows embedded software products on Advantech platforms to more effectively support the embedded computing community. Customers are freed from the hassle of dealing with multiple vendors (Hardware suppliers, System integrators, Embedded OS distributor) for projects. Our goal is to make Windows embedded software solutions easily and widely available to the embedded computing community.

4.2 Driver Installation

4.2.1 Windows 7 Professional

To install the drivers, insert the driver CD into DVD-ROM, select the drivers that need to be installed, then launch setup file under each function folder and follow Driver Setup instructions to complete the process.

4.2.2 Other OS

To install the drivers for another Windows OS or Linux, please browse the CD to run the setup file under the appropriate OS folder (s).

4.3 Value-Added Software Services

Software API: An interface that defines the ways by which an application program may request services from libraries and/or operating systems. Provides not only the underlying drivers required but also a rich set of user-friendly, intelligent and integrated interfaces, which speeds development, enhances security and offers add-on value for Advantech platforms.

4.3.1 SUSI Introduction

To make hardware easier and more convenient to access for programmers, Advantech has released a suite of API (Application Programming Interface) in the form of a program library. The program Library is called Secured and Unified Smart Interface or SUSI for short.

In modern operating systems, user space applications cannot access hardware directly. Drivers are required to access hardware. User space applications access hardware through drivers. Different operating systems usually define different interface for drivers. This means that user space applications call different functions for hardware access in different operating systems. To provide a uniform interface for accessing hardware, an abstraction layer is built on top of the drivers and SUSI is such an abstraction layer. SUSI provides a uniform API for application programmers to access the hardware functions in different Operating Systems and on different Advantech hardware platforms.

Application programmers can invoke the functions exported by SUSI instead of calling the drivers directly. The benefit of using SUSI is portability. The same set of APIs is defined for different Advantech hardware platforms. Also, the same API set is implemented in different Operating Systems. This user's manual describes some sample programs and the API in SUSI. The hardware functions currently supported by SUSI can be grouped into a few categories including Watchdog, I²C, SMBus, GPIO, and VGA control. Each category of API in SUSI is briefly described below.

4.3.2 Software APIs

4.3.2.1 The GPIO API

General Purpose Input/Output is a flexible parallel interface that allows a variety of custom connections. It allows users to monitor the level of signal input or set the output status to switch on/off a device. Our API also provides Programmable GPIO, which allows developers to dynamically set the GPIO input or output status.

4.3.2.2 The SMBus API

The System Management Bus (SMBus) is a two-wire interface defined by Intel Corporation in 1995. It is based on the same principles of operation of I²C and is used in personal computers and servers for low-speed system management communications. Nowadays, it can be seen in many types of embedded systems. As with other API in SUSI, the SMBus API is available on many platforms including Windows 7.

4.3.2.3 The Display Control API

There are two kinds of VGA control APIs, backlight on/off control and brightness control. Backlight on/off control allows a developer to turn on or off the backlight, and to control brightness smoothly.

- 1. Brightness Control
 - The Brightness Control API allows a developer to interface with an embedded device to easily control brightness.
- 2. Backlight Control
 - The Backlight API allows a developer to control the backlight (screen) on/off in an embedded device.

4.3.2.4 The Watchdog API

A watchdog timer (abbreviated as WDT) is a hardware device which triggers an action, e.g. rebooting the system, if the system does not reset the timer within a specific period of time. The WDT API in SUSI provides developers with functions such as starting the timer, resetting the timer, and setting the timeout value if the hardware requires customized timeout values.

4.3.2.5 The Hardware Monitor API

The hardware monitor (abbreviated as HWM) is a system health supervision capability achieved by placing certain I/O chips along with sensors for inspecting the target of interests for certain condition indexes, such as fan speed, temperature and voltage etc.

However, due to the inaccuracy among many commercially available hardware monitoring chips, Advantech has developed a unique scheme for hardware monitoring achieved by using a dedicated micro-processor with algorithms specifically designed for providing accurate, real-time and reliable data content; helping protect your system in a more reliable manner.

4.3.2.6 The Power Saving API

- 1. CPU Speed
 - Make use of Intel SpeedStep technology to reduce power consumption. The system will automatically adjust the CPU Speed depending on system loading.
- 2. System Throttling
 - Refers to a series of methods for reducing power consumption in computers by lowering the clock frequency. APIs allow the user to lower the clock from 87.5% to 12.5%.

4.3.3 SUSI Installation

SUSI supports many different operating systems. Each subsection below describes how to install SUSI and related software on a specific operating system. Please refer to the subsection matching your operating system.

4.3.3.1 Windows 7

In Windows 7, you can install the library, drivers and demo programs onto the platform easily using the installation tool--The SUSI Library Installer. After the installer has executed, the SUSI Library and related files for Windows 7 can be found in the target installation directory. The files are listed in the following table.

Directory	Contents
\Library	Susi.lib
	Library for developing the applications on Windows 7.
	■ Susi.dll
	Dynamic library for SUSI on Windows 7.
\Demo	SusiDemo.EXE
	Demo program on Windows® 7.
	Susi.dll
	Dynamic library for SUSI on Windows 7.
\Demo\SRC	Source code of the demo program on Windows 7.

The following section illustrates the installation process.

The SUSI Library Installer screen shots shown below are examples only. Your screens may vary depending on your particular version.

1. Extract Susi.zip.

2. Double-click the "Setup.exe" file.

The installer searches for a previous installation of the SUSI Library. If it locates one, a dialog box opens asking whether you want to modify, repair or remove the software. If a previous version is located, please see the [Maintenance Setup] section. If it is not located, an alternative window appears. Click Next.

4.3.4 SUSI Sample Programs

Sample Programs

The sample programs demonstrate how to incorporate SUSI into your program. The sample programs run in graphics mode in Windows® 7 are described in the subsections below.

Windows Graphics Mode

Each demo application contains an executable file SusiDemo.exe, a shared library Susi.dll and source code within the release package.

SusiDemo.exe is an executable file and it requires the shared library, Susi.dll, to demonstrate the SUSI functions. The source code of SusiDemo.exe must be compiled under Microsoft Visual C++ 6.0 on Windows 7. Developers must add the header file Susi.h and library Susi.lib to their own projects when they want to develop something with SUSI.

SusiDemo.exe

The SusiDemo.exe test application is an application which uses all functions of the SUSI Library. It has five major function blocks: Watchdog, GPIO, SMBus, I²C and VGA control. The following screen shot appears when you execute SusiDemo.exe. You can click function tabs to select test functions respectively. Some function tabs will not show on the test application if your platform does not support such functions. For a complete support list, please refer to Appendix A. We describe the steps to test all functions of this application.

1.			

When the application is executed, it will display GPIO information in the GPIO INFORMATION group box. It displays the number of input pins and output pins. You can click the radio button to choose to test either the single pin function or multiple pin functions. The GPIO pin assignments of the supported platforms are located in Appendix B.

- Test Read Single Input Pin
 - Click the radio button- Single-Pin.
 - Key in the pin number to read the value of the input pin. The Pin number starts from '0'.
 - Click the READ GPIO DATA button and the status of the GPIO pin will be displayed in (R/W) Result field.
- Test Read Multiple Input Pin
 - Click the radio button- Multiple-Pins.
 - Key in the pin number from '0x01' to '0x0F' to read the value of the input pin. The pin numbers are ordered bitwise, i.e. bit 0 stands for GPIO 0, bit 1 stands for GPIO 1, etc. For example, if you want to read pin 0, 1, and 3, the pin numbers should be '0x0B'.
 - Click READ GPIO DATA button and the statuses of the GPIO pins will be displayed in (R/W) Result field.
- Test Write Single Output Pin
 - Click the radio button- Single-Pin.
 - Key in the pin numbers you want to write. Pin numbers start from '0'.
 - Key in the value either '0' or '1' in (R/W) Result field to write the output pin you chose above step.
 - Click the WRITE GPIO DATA button to write the GPIO output pin.

- Test Write Multiple Output Pins
 - Click the radio button- Multiple-Pins.
 - Key in the pin number from '0x01' to '0x0F' to choose the multiple pin numbers to write the value of the output pin. The pin numbers are ordered bitwise, i.e. bit 0 stands for GPIO 0, bit 1 stands for GPIO 1, etc. For example, if you want to write pin 0, 1, and 3, the pin numbers should be '0x0B'.
 - Key in the value in (R/W) Result field from '0x01' to '0x0F' to write the value of the output pin. The pin numbers are ordered bitwise, i.e. bit 0 stands for GPIO 0, bit 1 stands for GPIO 1, etc. For example, if you want to set pin 0 and 1 high, 3 to low, the pin number should be '0x0B/, and then you should key in the value '0x0A' to write.
 - Click the WRITE GPIO DATA button to write the GPIO output pins.

SMBus

When the application has executed, you can click the radio button to choose to test each access mode, i.e. Access a byte, Access multiple bytes and Access a word. All data must be read or written in hexadecimal except the numbers for radio button: Access multiple bytes mode must be written in decimal. You can test the functionalities of the watchdog as follows:

- Read a byte
 - Click the radio button- Access a byte.
 - Key in the slave device address in the Slave address field.
 - Key in the register offset in the Register Offset field.
 - Click the READ SMBus DATA button and a byte of data from the device will be shown on the Result field.

- Write a byte
 - Click the radio button- Access a byte.
 - Key in the slave device address in Slave address field.
 - Key in the register offset in Register Offset field.
 - Key the desired data in the Result field to write to the device.
 - Click the WRITE SMBus DATA button and then the data will be written to the device through SMBus.
- Read a word
 - Click the radio button- Access a word.
 - Key in the slave device address in the Slave address field.
 - Key in the register offset in the Register Offset field.
 - Click the READ SMBus DATA button and then a word of data from the device will be shown on the Result field.
- Write a word
 - Click the radio button- Access a word.
 - Key in the slave device address in the Slave address field.
 - Key in the register offset in the Register Offset field.
 - Key in the desired data, such as 0x1234, in the Result field to write to the device.
 - Click the WRITE SMBus DATA button and the data will be written to the device through the SMBus.
- Read Multiple bytes
 - Click the radio button- Access multiple bytes.
 - Key in the slave device address in the Slave address field.
 - Key in the register offset in the Register Offset field.
 - Key in the desired number of bytes, such as 3, in the right side field of radio button- Access multiple bytes. The number must be written in decimal.
 - Click the READ SMBus DATA button and then all data from the device will be divided from each other by commas and be shown in the Result field.
- Write Multiple bytes
 - Click the radio button- Access multiple bytes.
 - Key in the slave device address in the Slave address field.
 - Key in the register offset in the Register Offset field.
 - Key in the desired number of bytes, such as 3, in the right side field of the radio button- Access multiple bytes. The number must be written in decimal.
 - Key in all the desired data in the Result field in hexadecimal format, divided by commas, for example, 0x50,0x60,0x7A.
 - Click the WRITE SMBus DATA button and all of the data will be written to the device through the SMBus.

When the application is executed, it will display two blocks of VGA control functions. The application can turn on or turn off the screen shot freely, and it also can tune the brightness of the panels if your platform is being supported. You can test the functionalities of VGA control as follows:

- Screen on/off control
 - Click the radio button ON or push the key F11 to turn on the panel screen.
 - Click the radio button OFF or push the key F12 to turn off the panel screen.
 - The display chip of your platform must be in the support list in Appendix A, or this function cannot work.
- Brightness control
 - Move the slider in increments, using either the mouse or the direction keys, or click the UP button to increase the brightness.
 - Move the slider in decrements, using either the mouse or the direction keys, or click the DOWN button to decrease the brightness.

Watchdog

				De	mo Tool	- 🗆 🗙	
<u>H</u> elp	_			28.11	76

When the application is executed, it will display watchdog information in the WATCH-DOG INFORMATION group box. It displays max timeout, min timeout, and timeout steps in milliseconds. For example, a 1~255 seconds watchdog will have 255000 max timeout, 1000 min timeout, and 1000 timeout steps. You can test the functionality of the watchdog as follows:

- Set the timeout value 3000 (3 sec.) in the SET TIMEOUT field and set the delay value 2000 (2 sec.) in the SET DELAY field, then click the START button. The Timeout Countdown field will countdown the watchdog timer and display 5000 (5 sec.).
- Before the timer counts down to zero, you can reset the timer by clicking the REFRESH button. After you click this button, the Timeout Countdown field will display the value of the SET TIMEOUT field.
- If you want to stop the watchdog timer, just click the STOP button.

Hardware Monitor

<u>H</u> elp				
PIO HWM Inform	mation SMBus	VGA WDog		
tem Name	Value	Minimum Value	Maximum Value	Unit
Voltage				
/core	0.789	0.789	0.796	V
5V	4.765	4.739	4.791	V
12V	11.75	11.75	11.812	V

WDT & GPIO

B.1 Watchdog Timer Sample Code

Watchdog function:

```
The SCH3114 Runtime base I/O address is A00h
Setting WatchDog time value location at offset 66h
If set value "0", it is mean disable WatchDog function.
Superio_GPIO_Port = A00h
mov dx,Superio_GPIO_Port + 66h
mov al,00h
out dx,al
.model small
.486p
.stack 256
.data
SCH3114_IO EQU A00h
.code
org 100h
.STARTup
;47H
;enable WDT function bit [0]=0Ch
mov dx, SCH3114_IO + 47h
mov al, 0Ch
out dx,al
;65H
;bit [1:0]=Reserved
;bit [6:2]Reserve=00000
;bit [7] WDT time-out Value Units Select
;Minutes=0 (default) Seconds=1
mov dx, SCH3114_IO + 65h;
mov al,080h
out dx,al
;66H
;WDT timer time-out value
;bit[7:0]=0~255
mov dx,SCH3114 IO + 66h
mov al,01h
out dx,al
;bit[0] status bit R/W
;WD timeout occurred =1;WD timer counting = 0
```

B.2 GPIO Sample Code

END

```
The SCH3114 Runtime base I/O address is AOOh
.model small
.486p
.stack 256
.data
SCH3114_IO EQU A00h
.code
org 100h
.STARTup
; Configuration GPIO as GPI or GPO by below register:
; GPIO0 = 23H, GPIO4 = 27H
; GPIO1 = 24H, GPIO5 = 29H
; GPIO2 = 25H, GPIO6 = 2AH
; GPIO3 = 26H, GPIO7 = 2BH
; Set 00H as output type, set 01H as input type
; Register 4BH configuration GPO value as high or low:
; 1 = HIGH
; 0 = LOW
mov dx,SCH3114_IO + 23h
                    ;GPIO 0
mov al,00h
                      ;Set GPIO 0 as output type
out dx,al
mov dx,SCH3114_IO + 4Bh
mov al,01h
                     ;Set GPIO 0 as high value.
out dx,al
.exit
END
```

System Assignments

C.1 System I/O Ports

Table C.1: System I/O Ports	
Addr. Range (Hex)	Device
20-2D	Interrupt Controller
2E - 2F	Motherboard resources
30 - 3D	Interrupt Controller
40 - 43	System timer
4E - 4F	Motherboard resources
50 - 53	System timer
61 - 67	Motherboard resources
70 - 7F	System CMOS/real time clock
80 - 92	Motherboard resources
A0 - B1	Interrupt Controller
B2 - B3	Motherboard resources
B4 - BD	Interrupt Controller
2F8 - 2FF	COM2
3B0 - 3DF	Intel? HD Graphics
3F8 - 3FF	COM1
400 - 47F	Motherboard resources
4D0 - 4D1	Interrupt Controller
500-57F	Motherboard resources

C.2 1st MB Memory Map

Table C.2: 1st MB Memory Map		
Addr. Range (Hex)	Device	
A0000h - BFFFFh	IntelQ® HD Graphics	
A0000h - BFFFFh	PCI Bus	
C0000h - DFFFFh	PCI Bus	
E0000h - FFFFFh	PCI Bus	
90400000 - 905FFFFF	Intel® Trusted Execution Engine Interface	
E0000000 - FEFFFFF System resources		

C.3 Interrupt Assignments

Table C.3: Interrupt assignments	
Interrupt#	Interrupt Source
NMI	Parity error detected
IRQ0	System timer
IRQ1	Using SERIRQ, Keyboard Emulation
IRQ2	Slave controller INTR output
IRQ3	Communications Port (COM2)
IRQ4	Communications Port (COM1)
IRQ5	Available
IRQ6	Available
IRQ7	Available
IRQ8	Internal RTC or HPET
IRQ9	Microsoft ACPI-Compliant System
IRQ10	Available
IRQ11	SMBus Port
IRQ12	Available
IRQ13	Numeric data processor
IRQ14	SATA controller
IRQ15	SATA controller
